Name:	

Perfect Packaging Project

You are on a team of design specialists. Your team has been hired to create a new package for a company's product with a set volume. The package can be any shape but must have an appropriate volume, within 4 units of the volume of the product to account for margin of error). You will need to take the surface area of your packaging into consideration to keep it cost friendly.

You will work <u>individually on one design</u> to bring to <u>your team</u> where you will ultimately decide on one design to promote.

You will present your design to your team by providing the following:

- 1. A labeled and neat sketch of your packaging
- 2. The Surface Area and Volume of your packaging
 - Work must be shown
 - In SI and Imperial Units
- 3. A paragraph form proposal on why your packaging should be used.
 - Be sure to include the following reasons:
 - i. Design intrigue, eye catching to customers
 - ii. Why you chose this shape over the other shapes
 - iii. Surface Area and what it means to the company
 - iv. Volume and what it means to the company

Then as a team you will:

- 1. Decide on **one design** based on the above considerations
- 2. Write in paragraph form why your group decided on that design over the others including it's surface area and volume in **SI and Imperial units**.
- 3. Draw a diagram of the packaging to scale in SI and Imperial units

Time Frame for Project			
Friday: October 30 th	Start Project		
Monday: November 3 rd	Individual section completed and handed in Start team work		
Wednesday: November 4 th	Team work due

Sketch X2	Lines are straight, product is proportional all dimensions are given and labeled.	Generally neat but product is not proportional or dimensions are not always given or labeled.	Sketch is roughly done, but dimensions are given and labeled.	Sketch is roughly done. Dimensions are not given or labeled.
Surface Area and Volume	The report template is used. Work is shown, calculations are done in both SI and Imperial Units and correct.	The report template is not used or work is not fully shown or one of the calculations are incorrect but done in both SI and Imperial Units	The report template is not used and work is not shown but calculations are correct and in both SI and Imperial Units or both of the calculations are incorrect.	The report template is not used or work is not shown and calculations are incorrect and not in SI and Imperial Units.
Written Support X2	Typed, in paragraph form, includes and explains all required components. Sells the design to the reader.	Typed, in paragraph form, includes but may not explain all required components.	Typed, in paragraph form, does not include all required components or explanations.	Not in paragraph form and doesn't seek to sell the design.
